Experiment 8

Name: Maithili Sawant

Roll No: 33

Class: SE3

Aim: Building a Simple Counter App using React Hooks. Use React Hooks (useState, useEffect) to manage state and side effects.

Code:

HTML

```html
<!DOCTYPE html>
<html>
<head>
  <title>Counter App</title>
</head>
<body>
  <div id="root"></div>
</body>
</html>
```

```python
import React from "react";
import ReactDOM from "react-dom/client";
import App from "./App";

const root = ReactDOM.createRoot(document.getElementById("root"));
root.render(<App />);
```

index.html | App.js | index.js

counter-app > src > App.js > default

```python
import React, { useState, useEffect } from "react";

function App() {
  const [count, setCount] = useState(0);

  // useEffect for side effect
  useEffect(() => {
    document.title = `Count: ${count}`;
  }, [count]);

  return (
    <div style={{ textAlign: "center", marginTop: "50px" }}>
      <h1>Counter App</h1>

      <h2>{count}</h2>

      <button onClick={() => setCount(count + 1)}>
        Increment
      </button>

      <button
        onClick={() => setCount(count - 1)}
        style={{ marginLeft: "10px" }}
      >
        Decrement
      </button>

      <button
        onClick={() => setCount(0)}
        style={{ marginLeft: "10px" }}
      >
        Reset
      </button>
    </div>
  );
}

export default App;
```
